PROFESSIONAL SUMMARY

Cybersecurity-focused Software Developer with experience in building web and mobile applications using React, Flutter, PHP, MySQL, Java, and REST APIs. Worked on real-world systems including POS platforms, business management applications, and multi-tenant learning management systems.

Skilled in frontend-backend integration, API development, database management, secure authentication, and scalable backend workflows. Interested in cybersecurity, secure application development, API security, vulnerability assessment, and modern security practices.

TECHNICAL SKILLS

Languages:	Java, Python, JavaScript, TypeScript, SQL, Dart
Frameworks & Tools:	React, Flutter, Git, GitHub, Postman, Hostinger
Cybersecurity Tools:	Wireshark, Nmap, Nessus, Burp Suite, Kali Linux, Metasploit
Databases:	MySQL
Core Concepts:	Data Structures, OOPs, DBMS, Computer Networks, Operating Systems, Deployment
Security Concepts:	REST API Security, JWT Authentication, OWASP Top 10, Secure Coding
Soft Skills:	Problem Solving, Analytical Thinking, Communication, Team Collaboration

PROFESSIONAL EXPERIENCE

Software Development Engineer Intern

Jan 2026 – Mar 2026

Daasoft IT Solutions

Pallavaram (Hybrid) | Certificate

- Contributed to the development and maintenance of scalable web and mobile applications for client projects, including frontend UI development, backend API integration, and database-driven workflows.
- Created responsive interfaces and scalable backend services using PHP and MySQL, reducing manual workflow complexity and improving operational efficiency for client applications.
- Architected RESTful APIs, integrated JWT-based authentication systems, managed MySQL database tables, and secured role-based workflows across multiple applications.
- Collaborated with development teams on debugging, deployment, API testing, feature implementation, and production-ready software delivery in agile environments.
- Gained practical exposure to secure application workflows, backend architecture, authentication handling, and real-world software engineering practices.

Tech: PHP, MySQL, Flutter, JavaScript, REST APIs, JWT, Git, HTML/CSS

PROJECTS

CoreDine – Restaurant POS & KOT Management System | Source Code

| Flutter, Dart, PHP, MySQL, Provider, REST API

- Developed a Restaurant POS and KOT Management System supporting dine-in and takeaway operations with billing, invoice generation, table management, and thermal receipt printing across multiple operational modules.
- Integrated role-based modules for Admin, Cashier, Waiter, and Kitchen Staff with real-time order processing and automated KOT generation to improve workflow coordination.
- Built scalable PHP REST APIs with MySQL for authentication, tenant isolation, reporting dashboards, and reliable backend communication.
- Delivered production-ready Flutter APK builds to clients with backend services deployed on Hostinger for real-world restaurant management usage.

EduTenant LMS – Multi-Tenant Learning Management System | Source Code

| Flutter, Dart, PHP, MySQL, REST API

- Developed a multi-tenant Learning Management System supporting multiple user roles and academic management workflows for centralized educational operations.
- Integrated enrollment, attendance tracking, assignments, scheduling, announcements, and progress monitoring within a centralized academic platform.
- Built scalable PHP REST APIs with MySQL for authentication, tenant isolation, reporting dashboards, and reliable backend communication.
- Deployed backend services on Hostinger and delivered production-ready mobile APK builds for client-based educational management workflows.

Rental Utility POS System | Source Code
| React, TypeScript, Tailwind CSS, PHP, MySQL, REST API

- Developed a Rental Utility POS System with quotation generation, delivery challans, invoice management, rental billing, and inventory tracking workflows supporting end-to-end business operations.
- Integrated customer ledger management, transaction traceability, transport charge calculation, financial reporting, and analytics workflows for operational tracking.
- Built scalable PHP REST APIs with MySQL for centralized data management, stock control, sales tracking, and automated report generation across multiple modules.
- Deployed the application on Hostinger with responsive dashboards, secure authentication workflows, and structured backend data handling for production usage.

ACHIEVEMENTS

- Created and deployed 3+ scalable web and mobile applications with secure authentication, real-world business workflows, and database-driven backend architectures.
- Engineered secure authentication workflows, role-based systems, and database-driven applications using REST APIs and JWT authentication.
- Continuously exploring cybersecurity concepts including secure coding, API security, vulnerability assessment, Linux system administration, and network security fundamentals.

EDUCATION

Bachelor of Technology with Specialization in Cyber Security SRM Institute of Science and Technology, Kattankulathur	2023–2027
--	------------------

CERTIFICATIONS

Red Hat Certified System Administrator (RHCSA) Red Hat	2024 Certificate
C++ Course: Learn the Essentials Scaler	2024 Certificate
